

# DANAVL BREEDS

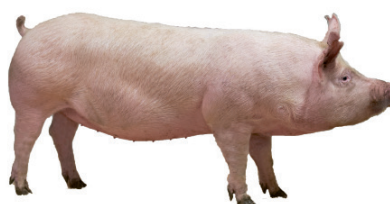

DanAvl is based on a three race system. Two breeds with superb mothering abilities are crossed to produce a SUPER hybrid.

This hybrid is crossed with a boar line with extraordinary good traits for slaughter pigs.

## THE SOW LINE

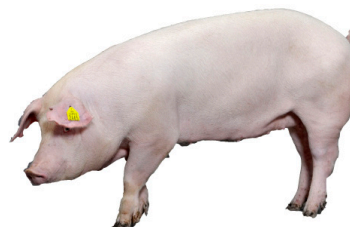

### DanAvl Yorkshire

- 937 grams per day (30-100kg)
- FCR 2,23 kg feed / kg gain
- 15,4 born
- 12,9 LP5

### DanAvl Landrace

- 1016 grams per day (30-100kg)
- FCR 2,27 kg feed / kg gain
- 15,3 born
- 12,1 LP5

## TERMINAL LINE

### DanAvl Duroc

- 1079 grams per day (30-100kg)
- FCR 2,18 kg feed / kg gain

All the figures are average figures taken from the annual report 2012 from DanAvl.

The genetic improvement in the breeding programme results in about 1.5€ per year per pig produced!

# DANAVL BREEDS

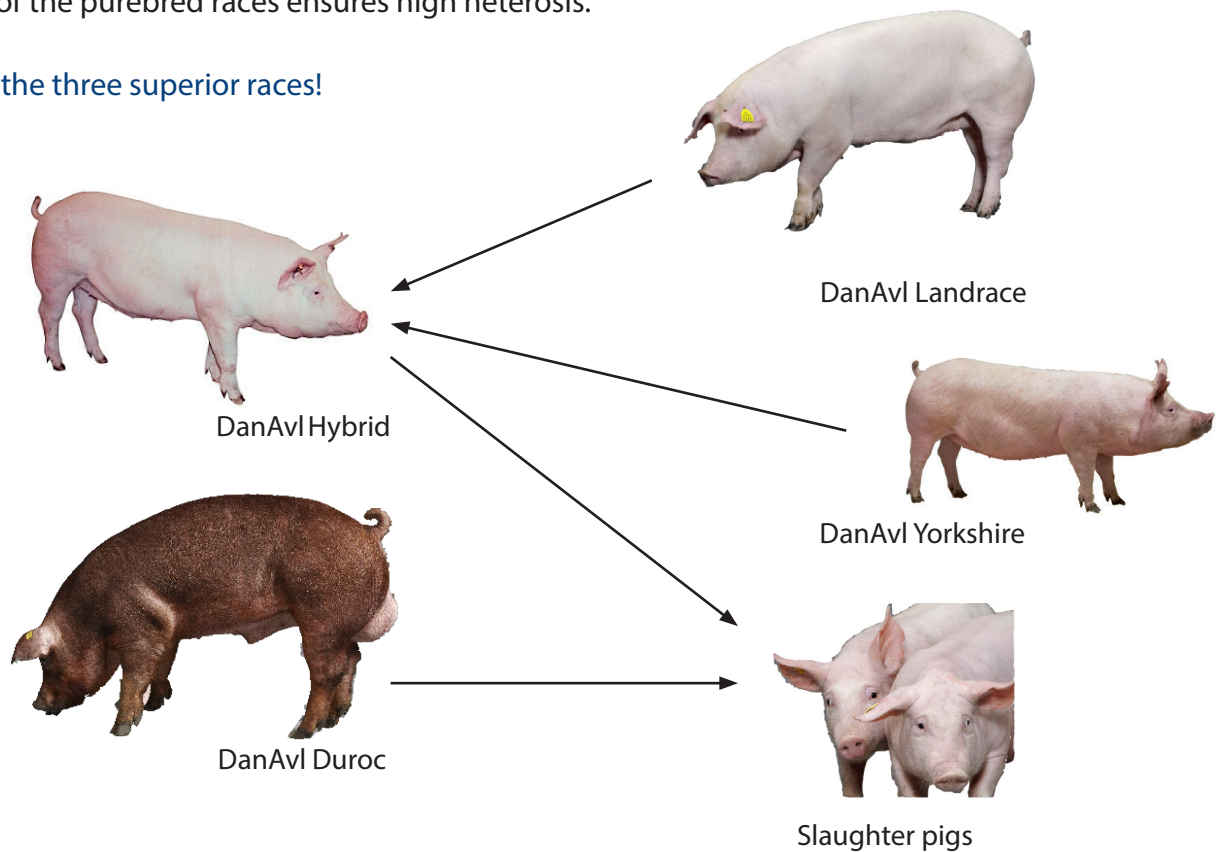

## DanAvl Hybrid

- Many live born
- Superior weaning
- High quality fatteners
- Uniform performance

The crossing of the purebred races ensures high heterosis.

The fusion of the three superior races!
